

Commercial Water Filtration

Corrigan's WQA certified professionals will
solve your toughest water problems by:

- Performing a thorough water analysis and determining your filtration needs
- Customizing a whole-building filtration system that will ensure consistent and reliable water quality
 - Providing a solution that will extend the life of your water-fed equipment
 - Understanding and utilizing the best technology available
 - Recommending the appropriate equipment based solely on your needs
- Maintaining your system's performance through scheduled service and emergency repair

**A Reputation for Creating Value
Through Quality Equipment Since 1979**

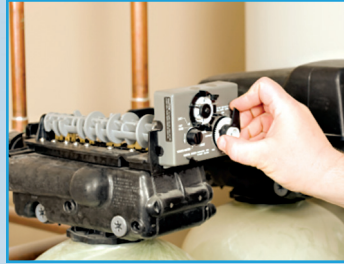

Commercial Water Filtration

Corrigan offers a variety of commercial water softeners, water filtration systems, reverse osmosis systems, and custom filters.

WATER SOFTENERS

Hard water is the most common water concern in America. Hard water minerals build up on fixtures, damaging appliances, water heaters, and water-fed equipment. Through an ion exchange process, water softening removes the hard minerals from water.

- Increases water heater efficiency by almost 30%
- Improves water flow and pressure by eliminating hardness buildup in pipes
- Reduces mineral stains and odors
- Extends life of water heater and other water-fed equipment

WATER FILTRATION SYSTEMS

Incoming water filtration systems remove impurities from a water source. Water passes through a media bed, particles become trapped, and high-quality water remains. Such systems can be installed at the point-of-use or point-of-entry, depending on a facility's needs.

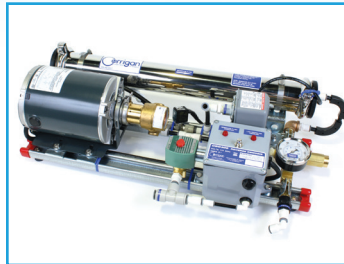

- Delivers filtered water to any application where high quality water is important
- Filters out impurities that affect smell, look, taste, and feel of water
- Reduces corrosion on pipes and appliances
- Extends life of water-fed equipment

REVERSE OSMOSIS SYSTEMS

Corrigan's HyperSoft™ is the most economical and effective way to produce high-quality water. In fact, it is the same method bottled water companies use to filter their water. The system forces tap water through a semi-permeable membrane, which separates the dissolved impurities from the filtered water, and rinses the impurities down the drain.

- Removes up to 99% of dissolved minerals
- Filters out impurities to make better-tasting beverages
- Applications range from single point-of-use systems to central installations
- Green engineering (only half of processed water goes down drain)
- Extends life of water-fed equipment

HyperSoft

Industries Served

- Supermarkets
- Warehouses
- Office Buildings
- Dry Cleaners
- Car Washes
- Schools
- Hotels
- Salons and Spas
- Aquariums
- And More!

Impurities Removed

- Particulate Matter
- Turbidity
- Sediment
- Total Dissolved Solids
- Lead
- Arsenic
- Asbestos
- Chlorine
- Calcium
- Magnesium
- Iron
- Hydrogen Sulfide

Maintenance Services

Water filtration systems require regular maintenance to ensure maximum performance and reliable water quality. Corrigan's WQA certified service team has the knowledge and experience to service just about all water filtration makes and models of all sizes. We provide emergency repair, scheduled service, and preventative maintenance plans.
