

CRO360

Reverse Osmosis System

Corrigan reverse osmosis filtration will increase your sales and profits with water that:

- Won't leave mineral and scale residue on surfaces
- Sharply lowers maintenance on water using equipment
 - Makes better tasting beverages and ice
 - Features 24V pump for pressurizing treated water

Corrigan's economical alternative for smaller RO applications.

A Reputation for Creating Value Through Quality Equipment

CRO360 Applications

- Automatic misting systems (helps eliminate scale spotting)
- Ice machines
- Bakery equipment
- Steam tables
- Floral
- Water vending equipment
- Steam equipment
- Deionization pretreatment
- Coffee & post mix equipment

CRO360 Features

- 360 gallons per day
- 95% average TDS rejection
- Permeate auto-flush*
- 3.16" x 18.75" membrane
- 50% recovery (one gallon to drain for every gallon made)
- Adjustable tank pressure switch
- 20" sediment and carbon pre-filters included with system
- Required inlet pressure 50psi
- 24V pump for pressurizing treated water

HuperSoftTM
Reverse Osmosis System

SYSTEM COMPONENTS

Filtration

A 20" sediment filter followed by a 20" carbon filter allows for greater filtering ability, longer time between changes and better membrane life.

RO System

Includes long-life membrane design as clean water automatically flushes hard water off membrane after each cycle.*

Accumulator Tank

Nine gallon water storage tank, sold separately.

SYSTEM INFORMATION

Reverse Osmosis Makes a Difference

Because the water going into it can adversely affect water using equipment, hard water and scale will translate into high maintenance cost. The process of reverse osmosis removes hardness ions and other scale constituents, thus producing purified water and significantly reducing service expenses.

"Fresh Ideas...Practical Solutions"

We offer a free water analysis to determine the best filtration choice for your location. Call 800-462-6478

***Permeate auto-flush** - After filling the storage tank, a typical RO shuts down leaving hard water inside the membrane. This hard water drastically shortens the life of the membrane and affects water quality upon start-up. The permeate auto-flush cleans hard water off the membrane using some of the high quality water from the storage tank after each cycle. This process extends membrane life and improves water quality.

A Corrigan Reverse Osmosis System

Since our invention and patent of the automatic produce mist system in 1979, Corrigan has grown to be a leader in perishable controls for the supermarket industry. Our experience and innovation is exemplified in quality equipment, and committed people that are dedicated to customer satisfaction. The CRO360 is a dependable, low-maintenance reverse osmosis system.
